

Matteo Graizzaro

Game Programmer

Game Developer with 4+ years of experience building multiplayer systems and live-ops features for mobile games.

I thrive at the intersection of clean code and player experience — specialized in C#, Unity, Unreal, and TypeScript, with a track record of shipping player-facing features that measurably improve retention and engagement. Comfortable working across client and server, I've grown through collaborative environments that showed me how vast and dynamic this industry really is. That variety is what keeps me driven — I'm always looking for the next challenge and system to learn.

Education

2017-2020 · Padua, IT

Professional Program

Game Design

Event Horizon School

2012-2017 · Valdagno, IT

High School Diploma

Computer Science

I.T.I.S V.E Marzotto

Language

Italian · Native

English · Proficient

Skills

 C#

 Typescript

 C++

 Unity

 Nakama

 Unreal Engine

 Claude

 Copilot

Work experience

○ Oct 2021 - Jul 2026

Whatwapp

Mid Game Developer · Burraco Team

- *Data-driven Development:* Co-designed players' onboarding with UI/UX Department, improving D7 retention, matches completed, playtime, and ad revenue metrics by 8%.
- *Software Quality:* Increased backend test coverage from 25% to 70% and maintained an 85% bug-fix rate, while contributing 10+ newly developed features.
- *AI Tooling:* Integrated Claude and GitHub Copilot into daily workflows for feature development, documentation, and testing, cutting development time by ~50%.

○ Nov 2021 - Jan 2023

Canals Village

Unreal Engine Developer · Art collaboration

- *Tooling:* Built C++ tools with Blueprint-editable interfaces, empowering artists to generate customizable meshes and streamline environment building.

○ Feb 2021 - Oct 2021

Farewell North

Italian Translator · Steam game

- *Localization:* Translated and culturally adapted 4,000+ lines from English to Italian, including language-dependent jokes and idioms.

○ Aug 2021 - Sep 2021

Solitaire

Unity Developer · Tech test

- *Prototyping:* Designed and developed a fully functional Solitaire game in Unity, with a 4-day prototyping phase followed by 7 days of polishing.

○ May 2021 - Jul 2021

Ploppem 2

Unity Developer · Personal project

- *Optimization:* Leveraged Unity's DOTS system to support 100+ on-screen enemies while maintaining stable frame rate performance.

○ Sep 2018 - Jul 2019

Oath

Producer · School project

- *Project Management:* Managed the Trello board for a 15-person team across 3 departments, centralizing tracking and streamlining cross-department communication to improve development efficiency.
- *Process Design:* Created a scalable file naming system, continuously refining it in response to department feedback to sustain efficiency as the project grew.

What steam will look like in 3 years

[Read article](#)

Jan 2021 · Gamasutra [Featured on the front page]

By analyzing data gathered using Steam's official API, I envision the prices, numbers, and genres of games that should have been released between 2021 and 2023.

Going deep in the Steam reviews

[Read article](#)

Jun 2020 · Gamasutra

What can be said about the first 3 years of a free Steam game called Robocraft, by analyzing its review numbers and score, gathered using Steam's official API.

Hobbies

- Writing sci-fi and fantasy fictions
- TRPGs such as Lancer
- Playing videogames both old and new
- Walking in the nature and exploring cities
